# ELLEN KENCHINGTON

## Deep-Sea Discoveries

Kenchington's research focuses on the ocean floor, many kilometres below the surface, where she maps and describes deep-sea biodiversity, discovering new species and habitats in the northwest Atlantic. Her work has led to over 50 protected areas for deep-sea corals and sponges.

Ingenium, Fisheries and Oceans Canada and Canadian Commission for UNESCO are committed to encouraging and empowering women and girls in science, technology, engineering, and math. Learn more at: [ingeniumcanada.org/womeninstem/](https://ingeniumcanada.org/womeninstem/)
